# AT RISK?

MANY PEOPLE WHO ARE AT HIGH RISK  
FOR DEVELOPING **SEVERE COVID-19**  
DON'T KNOW THEIR RISK.

If you are 50 or over, have diabetes, cancer, mental health conditions, obesity, asthma, or a number of other health conditions, you are at greater risk of developing severe COVID-19.

According to the CDC,<sup>1</sup> those who are impacted by severe COVID-19 are more likely to be hospitalized, need intensive care, require a ventilator, or even die.

It is important to know if you have one or more risk factors for severe COVID-19 and to be prepared to start treatment within days of getting COVID-19.

Scan to learn more about risk factors for severe COVID-19 and what to do if you have symptoms, or visit [cveep.org/treatments](https://cveep.org/treatments).
